

I-COACHING

Accessories Buses

By changing the colour of the symbols in the display from green to red it provides instant feedback when one or more of the six parameters are exceeded. The threshold levels are soft settings configurable down to vehicle level.

Statistics and follow-up

The driving parameters are logged (on vehicle or driver level) and summarised in reports, "Vehicle Coaching" and/or "Driver Coaching", in the Fleet Management portal. The statistics clearly show if there is a need for adjustment of the driving style.

With driver training it is fully possible to achieve fuel savings of up to 10%.

Add to that the increased passenger comfort which is a direct result of smoother driving.

I-Coaching assists the driver to drive more economically, safely and in a way that increases passenger comfort. Through instant feedback, the effect of driving behaviour is shown in real time.

As an operator you have control over how your vehicles are utilised.

The logged data indicates which improvements can be made to reduce fuel consumption and emissions as well as wear and tear.

Your key benefits are:

- Increased fuel efficiency
- Increased uptime
- Improved passenger comfort
- Reduced service and maintenance costs
- More motivated drivers
- Reduced administration

NOTE! I-Coaching requires AIC3 or AIC4

Instant driver feedback

I-Coaching is the driver's display, easily visible while driving.

Description	Part number	Comment
I-Coaching kit, vertical layout	22333662	Incl. cables & bracket
I-Coaching kit, horizontal layout	22255199	Incl. cables & bracket
Conversion Kit, EURO 6	85142797	
Conversion Kit, Euro 4 & EURO 5	85142796	

Use kit number for installation instruction.
